

🧠 LLM suggestion

Here's a concise, clear, actionable English summary for the single building:

The building's center is offset by 8.03 meters (71%tile) from its expected location, with an estimated XY translation of ~8.03 m towards NW. The Hausdorff distance (85.81 m) and height error (84.00 m) suggest that the outline/shape discrepancy dominates rather than placement errors. To improve accuracy, I recommend inspecting polygon generalization or boundary snapping to correct shape inconsistencies. Additionally, verifying the height source and vertical datum may help address the significant height error.

Step 7: Read **Summary + Concrete suggestions** → note actions & plan fix.

Concrete suggestions:

- * Inspect polygon generalization or boundary snapping to correct shape inconsistencies
- * Verify the height source and vertical datum to address the significant height error

OSM

REF

ID: 12364

Center: 116.450324, 39.905666

IoU (OSM vs REF): 46.88%

Summary: Outline/shape discrepancy dominates rather than placement. Center offset: 8.03 m (71%tile). Hausdorff (2D outline): 85.81 m (worst ~1%). Height error: 84.00 m (worst ~1%), OSM taller than reference. Area error: 33.6% (top 25%), footprint area larger than reference. Estimated XY translation for alignment: ~8.03 m towards NW (dx=-6.81 m, dy=4.26 m). Suggestion: inspect polygon generalization or boundary snapping; verify height source and vertical datum; revisit footprint scaling or segmentation.

Values:

- Hausdorff: 85.81m
- Center offset: 8.03m
- Height error: 84.00m
- Area error: 33.57%
